

**Liberty Utilities – Bellflower/Norwalk (PWS No. CA1910211)**

**Verification of Lead Status Unknown**

November 21, 2023

## Acronyms

LCRR	Lead and Copper Rule Revision
LSL	Lead Service Line
PWS	Public Water System
SL	Service Line

## Table of Contents

Appendix C: LSL Field Investigation Recordkeeping Spreadsheet.....	42

## Background

The Lead and Copper Rule Revision (LCRR) requires the PWS to develop an inventory to identify the materials of service lines connected to the public water distribution system (40 CFR §141.84(a)). The PWS must also review sources of information to identify service line materials for the initial inventory. The water system may use sources of information if approved by the State (40 CFR §141.84(a)(3)) such as any identification method to assess service lines materials (40 CFR §141.84(a)(3)(iv)).

One identification method or verification strategy is a statistical approach. The statistical approach allows for completing a service line inventory with a 95% level of statistical confidence (with ±5% margin of error and 50% sample proportion).

A key factor in the success of the strategy mentioned above is the use of a randomly generated list of unknown service lines to be physically inspected. If ANY service line is found to be an LSL (either through the initial records review or the verification process), then this framework will not be used, and an alternate process will be discussed with the State. If NO service line is found to be lead through the records review and verification process, then the remaining unknown service lines will be classified as non-lead, and the submitted inventory will be final (e.g., containing all non-lead service lines). If, in the future, an LSL is found, then the water system will contact the state within 30 days to discuss a path forward. . **Since Liberty acquired Liberty Utilities – Bellflower/Norwalk in January 2016, Liberty has not encountered any lead service lines.**

**Known** service lines are defined as service lines where the pipe materials are classified using records<sup>(1)</sup>. Records that can be used to classify a SL are mentioned in 40 CFR §141.84 (a)(3)(i),(ii),(iii),(iv). Records showing that service lines were installed after the state lead ban (or local ordinance with an earlier lead ban) and service lines >2 inches (diameter allowance depends on state) will be considered known and classified as non-lead.

**Unknown** service lines are defined as a service line of unknown material with no/low confidence documented material history<sup>(1)</sup>.

Identification methods or verification strategies are based on system size. The verification strategies for the identification of unknown service lines are:

- ✓ Interpolation: Best for small systems with less than 1,500 unknown service connections. For the interpolation method, the PWS must physically verify at least 20% of the total number of unknown service lines.
- ✓ Stratified Random Sampling: Best for medium systems (1,500 to 10,000 unknown service connections); to large systems (more than 10,000 unknown service connections.) For the stratified random sampling, the PWS must physically verify enough lines to reach a minimum 95% confidence level.

### **Identification Process**

Before using the statistical approach to identify unknown service lines, Liberty completed the initial inventory using approved methodologies, such as the ones mentioned in 40 CFR §141.84 (a)(3), as well as

post-1986 construction and larger pipe diameters, to categorize service lines. Based on the applied methodologies, no LSLs were found. Therefore, it is appropriate to use the statistical approach.

The statistical method includes the following steps:

- ✓ Step 1: Identification of all service lines of unknown material.
- ✓ Step 2: Identification of the number of service lines to be physically inspected.
- ✓ Step 3: Random selection of service lines for physical inspection.
- ✓ Step 4: Physical inspection of the service lines.
- ✓ Step 5: Record of the physical inspection process.
- ✓ Step 6: Results input of unknown service lines into the inventory.
- ✓ Step 7: Retention of identification records.

## Step 1: Identification of all service lines of unknown material.

Table 1 shows the total of service connections in Liberty Utilities – Bellflower/Norwalk (PWS. No. CA1910211).

Table 2 presents the total number of all the water service lines that could not be categorized using the approved methodologies shown in 40 CFR §141.84 (a)(3) for Liberty Utilities – Bellflower/Norwalk (PWS No. CA1910211).

**Table 1: Total of Service Connections**

System Name	Total of Service Connections
Liberty Utilities – Bellflower/Norwalk	16,522

**Table 2: Service Lines with unknown materials**

Category		Number of Service Lines
Public Side	Private Side	
Unknown	Unknown	290
Known (non-lead)	Unknown	15,584
Unknown	Known (non-lead)	0
<b>Total</b>		<b>15,874</b>

Table 3 shows the categorization of the unknown service lines by decades:

**Table 3: Categorization of unknown service lines by decades**

Decade	Unknown SLs by Decade	Percentage of Unknown SLs by Decade
< 1900s	0	0%
1900 – 1920	57	0.36%
1921 – 1950	6,843	43.11%
1951 - 1986	8,974	56.53%
<b>Total</b>	<b>15,874</b>	<b>100%</b>

## Step 2: Identification of the Number of Service Lines to be Physically Inspected.

---

Liberty Utilities – Bellflower/Norwalk has more than 1,500 unknown service lines, so the Stratified Random Sampling method is appropriate. Using the Stratified Random Sampling method, the PWS must physically verify an amount of the total number of unknowns maintaining a minimum of 95 percent level of statistical confidence. To ensure that the confidence level in the results is higher, Liberty is proposing the verification of 50% more than the minimum number required.

The Stratified Random Sampling method considers the following:

- ✓ Buildings built between 1950 and 1986, very little to no lead was used on private property.
- ✓ Buildings built between 1900 and 1950, splitting the system up by decades depending on how many buildings fit in each decade would be important.
- ✓ Buildings built prior to 1900, lead is likely to be found.

Table 4 presents the minimum and proposed number of unknown service lines to be physically verified by decades.

**Table 4: Minimum and Proposed Number of Unknown SLs to be Physically Verified by Decades**

Built year	Total of Unknown SLs	Number of SLs to Verify (Minimum)	Number of SLs to Verify (Minimum x 1.5) (Proposed)
< 1900	0	0	0
1900 - 1920	57	50	57
1921 - 1950	6,843	364	546
1951 - 1986	8,974	368	552
<b>Total</b>	<b>15,874</b>	<b>782</b>	<b>1,155</b>

### **Step 3: Random Selection of Service Lines for Physical Inspection.**

---

From the number of unknown service lines identified in Step 1 and the proposed number from Step 2, Liberty randomly selected service lines to be physically inspected as determined in Step 2. The selection was uniformly random and not based on any specific criteria, which could introduce bias.

The generation of the uniformly random set of service lines for inspection was created using a Microsoft Excel spreadsheet utilizing the RAND function. The RAND function in Excel is one of the functions specially designed for generating random numbers <sup>(2)</sup>.

The list of the random set of service lines for physical inspection is presented in Appendix A. The locations were separated by built date.

## **Step 4: Physical inspection of the service lines.**

---

The type of service line verification method that Liberty will use is:

- ✓ **Private Side:** Meter Pit Inspection.

At least one point of verification will be conducted for the portion of the unknown service line. The verification method includes meter pit inspection. If one or more of the original randomly selected sites cannot be verified, the next available location from the random number generation will be used. For example, if a system has 2,000 unknowns and has to verify 322 SLs but is only able to verify 312 SLs, then the next 10 SLs will be taken from the original random number list (e.g., 323 to 333).

Appendix B shows the LSL Field Investigation Sheet for a single site that Liberty will use in the verification process.

## **Step 5: Record of the physical inspection process.**

---

Liberty will use a Microsoft Excel spreadsheet to enter the service line category and materials observed at each point. The four service line category types shown in 40 CFR §141.84 (4) are lead, non-lead, Non-Lead, and unknown. Liberty will use subclassification categories (e.g., copper, plastic) to capture the various material types for Liberty's records.

Appendix C shows the recordkeeping spreadsheet that will be used to record the findings.

## **Step 6: Results input of unknown service lines into the inventory.**

For unknown service lines that will be inspected for the statistical sampling, Liberty will record the water system material identification method (physical inspection – meter pit inspection). Liberty will list the exact line material type in the inventory spreadsheet found in Appendix C.

For unknown service lines not needing to be inspected, Liberty will record the material identification method as “*statistical*” and service line material as *non-lead*.

## **Step 7: Retention of Identification Records.**

---

Liberty will retain all the documentation of all service line identification efforts and will be available to the Division of Drinking water (DDW) if requested.

# Appendix B: LSL Field Investigation Sheet – Single Site

## LCRR Field Investigation Template

Date of Inspection: \_\_\_\_\_

Customer Name: \_\_\_\_\_

Address/Location of Service Line: \_\_\_\_\_

Meter Number: \_\_\_\_\_

Description of Meter and/or Location: \_\_\_\_\_

### Material for Public Service Line

- Lead
- Non-Lead                       Non-Lead
- Galvanized
- Non-Lead Copper
- Non-Lead Plastic
- Non-Lead – Other

### Material for Private Service Line

- Lead
- Galvanized
- Non-Lead Copper
- Non-Lead Plastic
- Non-Lead - Other

### Public Side Pipe Diameter

- 5/8 inch       ½ inch
- 1 inch         ¾ inch
- 1 ½ inch
- 2 inch

### Private Side Pipe Diameter

- 5/8 inch       ½ inch
- 1 inch         ¾ inch
- 1 ½ inch
- 2 inch

Is there a lead connector? (Y) / (N)

Is there a Lead Solder in the Service Line? (Y) / (N)

Describe any other fitting and equipment connected to the service line that contains lead (for example, a backflow preventer or meter containing lead):

\_\_\_\_\_  
\_\_\_\_\_

### Building Type:

- Single Family Home                       Building
- Multi-Family Home                       Other: \_\_\_\_\_

## Appendix C: LSL Field Investigation Recordkeeping Spreadsheet.

PWS Name: \_\_\_\_\_

PWS No. \_\_\_\_\_

LSL Field Investigation Notes										
Investigation Date	Unique Service Line ID (if any)	Address	City	ZIP Code	Public SL Material Classification (*)	Public SL Material (**)	Private SL Material Classification (*)	Private SL Material (**)	Material Identification Method (***)	Comments

(\*) Material classification includes: Non-lead, galvanized requiring replacement, lead, unknown.

(\*) Materials include: Copper, plastic, galvanized, lead, other

(\*\*\*) Meter Pit inspection or Statistical
