

You pick the story Liberty provides the power

Liberty offers many great ways to **conserve electricity and help the environment**. Here are just a few of our energy saving tips:

Turn off ceiling fans when you leave the room. Keep in mind that fans cool down people by creating a wind chill effect and not cooling down the room itself.

When it comes to appliances and electronics, unplug when not in use or use a power strip and use the switch on the power strip to cut all power to the appliance and avoid “vampire” loads. Many appliances continue to draw a small amount of power when they are switched off.

Lighting is one of the easiest places to start saving energy in your home. By replacing your five most frequently used light fixtures or the bulbs in them with ENERGY STAR Certified lights, you can save \$70 a year in energy costs. (Source www.energy.gov)
