

Liberty UtilitiesSM

Summer is typically the time when construction is in full swing, and it's no different for Liberty Utilities.

You may have seen—or will see—work related to the utility projects below.

Each project has been designed to upgrade the existing system and improve reliability of the electricity delivered to your home or business.

7203 Alternate Feed.

This project provides backup power from the Truckee substation to the Northstar Village area and vice versa from Northstar substation to Martis Camp/Lahontan/Schaffer's Mill areas. You may see workers along Big Springs Drive and Mill Site Road installing underground cable, with trenching outside the roadway along existing easements. Above ground equipment will be screened from view. Construction to be completed in Fall, 2013.

7300 Line Rebuild.

This distribution line rebuild from the Tahoe City substation to Emerald Bay will improve backup reliability from the upgraded Meyers substation and 3400 line which was completed last year. The project will also replace aging power poles. Construction is expected to last for approximately three years.

625/650 Line Upgrade.

This major transmission line serves the areas of Northstar, Kings Beach, Tahoe Vista, Tahoe City and Squaw Valley. The \$46 million project will improve reliability, even if a portion of the closed loop system is damaged, by allowing greater load transfer and switching ability that benefits the entire system. We are currently in the permitting phase with TRPA, USFS and others, and hope to begin construction in 2014.
