

2024 Power Content Label

Do you know where your power comes from?

Electric providers are required to provide customers with an environmental power content label with information to evaluate services offered by competitive suppliers and electric utilities, and to provide information about the environmental and public health impacts of electric generation.

2024 POWER CONTENT LABEL		
Liberty Utilities (CalPeco Electric) LLC		
	General System Mix	CA Utility Average
Greenhouse Gas Emissions Intensity (lbs of CO ₂ e emitted per megawatt hour)	602	359
Electricity Sources	 	
■ Renewables and Zero-Carbon Resources		
■ Fossil Fuels and Unspecified Power		
RPS Eligible Renewables	36%	45%
Biomass & Biogas	0%	2%
Geothermal	17%	5%
Eligible Hydroelectric	0%	2%
Solar	19%	23%
Wind	0%	14%
Large Hydroelectric	0%	10%
Nuclear	0%	11%
Emerging Technologies	0%	0%
Other	0%	0%
Natural Gas	0%	10%
Coal & Petroleum	0%	2%
Unspecified Power (primarily fossil fuels)	64%	22%
Total	100%	100%
Retail sales covered by retired unbundled RECs	3%	
■ This label does not reflect compliance with the Renewables Portfolio Standard (RPS), which measures the use of tracking instruments called Renewable Energy Credits (RECs) over the course of multi-year compliance periods. RECs that are purchased separately from the renewable energy ("Unbundled RECs") can be used for RPS compliance, but they do not factor into the power mixes or GHG emissions intensities above. ■ GHG intensity figures exclude biogenic CO₂ and emissions from geothermal sources and grandfathered imports of firmed-and-shaped energy. For detailed information about all GHG emissions from California's retail electricity suppliers, visit the CEC webpage at the link below. ■ Unspecified power is electricity purchased from a genericized pool on the open market.
